ERRATUM

A critical review and meta-analysis of the association between overt hyperthyroidism and mortality

Frans Brandt, Anders Green^{1,2}, Laszlo Hegedüs and Thomas H Brix

The authors and the journal apologise for an error in Figure 2 of this article published in *European Journal of Endocrinology* (2011) 165 491–497.

European Journal of Endocrinology 166 958

In Table 2 the expected and observed numbers of cardiovascular deaths are listed. However, the authors have realised that there is a mismatch between these numbers and the calculated Relative Risk (RR) of cardiovascular death from the study of Hall *et al.* (ref 15) shown in Figure 2, Panel D. This has now been re-calculated and the corrected forrest plot is published below. Although this does not change the interpretation of their data, the corrected RR of cardiovascular mortality is 1.27(1.05–1.53) and not as published.

Panel D

Figure 2 Forrest plot showing the relative risk (RR) of cardiovascular mortality in patients diagnosed with hyperthyroidism.
