### Appendix 4. Outcome: toxicities

Dose red. = dose reduction, disc. = discontinuation, AE = adverse event, HFS = hand-foot syndrome.

* For these studies, it was unclear whether numbers of patients that had a dose reduction could be added to the number of patients that discontinued treatment due to AEs. To not overestimate toxicity, conservative estimates are given for dose reduction and/or discontinuation due to AEs.

* These numbers are based on the percentages AEs of the total cohort of solid cancer patients studied, as separate data for the MTC cohort are not available.
