Sup Fig 1. Genetic associations in GHD using regression modelling: effect not consistent between studies.

A) Box and whisker plots (median ± interquartile range) of growth response (change in height [cm]) by genotype of rs10248619 and gender in both the Y1 of the PREDICT LTFU and the VAL studies (numbers of patients [genotype colour]).

B) Box and whisker plots (median ± interquartile range) of growth response (height velocity SDS) by genotype of rs3110697 in both the Y1 of the PREDICT LTFU and the VAL studies (numbers of patients [genotype colour]).
